SEROLOGY TEST REPORT

Test Name	Result	Biological Reference Interval	Sample
COVID-19 ANTIGEN (Rapid chromatographic immunoassay)	Negative	Negative for SARS – CoV-2 Antigen test. Positive for SARS – CoV-2 Antigen test.	Nasopharyngeal swab

A negative test result may occur if the level of extracted antigen in a specimen is below the sensitivity of the test. A negative test result does not eliminate the possibility of SARS-CoV-2 infection, and should be confirmed by PCR. Children tend to shed virus for longer periods of time than adults, which may result in differences in sensitivity between adults and children.

Sample type : Nasopharyngeal swab
